Proportion is the size relationship between two or more objects.
It can be how the parts fit together to make a whole.

Exaggeration

A change in proportion can change the way we look at things.
Accurate proportions are used more when creating realistic images.
Distorted proportions are used more for cartoons and imaginary images.

I approximate and think about volume when I work with proportions.
It's math. I mentally measure size, shape, mass, weight and volume.
